PROJECT OF THE MONTH – ‘Biodegradable & Non-biodegradable’

What is biodegradable?

Materials or Objects capable of being broken down or decomposed to smaller products by the action of living things (such as animals or microorganisms). After being broken down they are easily absorbed into the soil to become nutrients or elements.

Examples of biodegradable items Food Waste, Animal And Human Excrement, Manure, Sewage, Slaughterhouse waste, Most paper products, Egg shells, Grasses, Flower/brush clippings etc

What is non-biodegradable?

Materials or Objects not capable of being broken down or decomposed to smaller products by the action of living things (such as animals or microorganisms).

Since they cannot be broken down or decomposed they clutter the earth's surface and natural resources and are termed as POLLUTANTS.

Examples of non-biodegradable items, Plastic Cups, Styrofoam Cups and Plates, Plastic bottles etc.

What is waste management?

Waste management is collection, transportation, and disposal of garbage, sewage and other waste products. Waste management involves the process of treating solid wastes and recycling items that don't belong to trash. It is about how garbage can be used as a valuable resource. Reduce, Reuse, and Recycle play a very important part in waste management.
